PROFESSIONAL SUMMARY

Vision systems and IT support professional with a B.S. in Computer Science and hands-on experience in battery manufacturing, machine operation, equipment support, inventory control, and technical research. Troubleshoots vision hardware, sensors, I/O signals, Linux systems, and software integrations while applying root-cause analysis and clear documentation to equipment reliability and product quality.

EXPERIENCE

Vision Systems Specialist I

June 2026 - Present

LG Energy Solution Michigan | Holland, MI

- Support Omron and Keyence vision controllers and PC-based inspection software used for automated quality inspection in lithium-ion battery production.
- Troubleshoot camera, lighting, trigger, sensor, encoder, and I/O-related alarms; restore image acquisition by resetting grab buffers, trigger counts, and trigger parameters.
- Adjust regions of interest and inspection parameters for tab pitch, width, height, foil exposure, coating defects, and NG marking to support stable measurement and accurate defect detection.
- Document incidents and root-cause findings and coordinate with production and engineering teams during rotating 12-hour shift coverage to support equipment uptime.

Research Assistant - Computer Vision and AI

January 2025 - Present

Grand Valley State University | Allendale and Grand Rapids, MI

- Integrate object-detection software with smart glasses and mobile hardware, connecting computer-vision models to wearable devices for real-time use.
- Test, debug, and improve system performance, usability, and user feedback across software-to-device interfaces.
- Maintained Linux-based research environments and automated Python data workflows, troubleshooting access, processing, and system-stability issues.
- Trained and optimized document-understanding models using knowledge distillation, pruning, and quantization; evaluated accuracy, throughput, and model size for deployment.

Inventory Control Coordinator

June 2024 - May 2026

Meijer | Holland, MI

- Managed daily inventory-control activities to maintain accurate stock levels, organized product flow, and timely replenishment.
- Investigated inventory discrepancies and corrected product locations and counts to support reliable department operations.
- Coordinated with supervisors and cross-functional departments while providing professional customer support in a fast-paced environment.

Data Science Intern

August 2024 - December 2024

Yiddish Arts and Academics Association of North America | Remote

- Configured and maintained a Firebase-based data system, managing user accounts, storage, access controls, and more than 500 application records.

- Created technical documentation for data processes and system workflows to improve knowledge transfer and support user onboarding.
- Worked with cross-functional stakeholders to translate business requirements into practical data analysis and visualization workflows.

Machine Operator

Summers 2022 and 2023

Gentex Corporation | Zeeland, MI

- Operated production equipment and assembled and inspected small automotive components in a high-volume environment.
- Performed in-process visual quality checks and separated or reported nonconforming parts to support product requirements.
- Monitored equipment and material flow, reported faults, and followed safety and housekeeping requirements.

Machine Technician

May 2021 - August 2021

Magna International | Holland, MI

- Set up and operated automotive production equipment using standardized work instructions.
- Performed basic machine checks and adjustments and escalated equipment or process issues to maintenance and supervision.
- Inspected output, completed production records, and supported changeovers, material handling, and workplace organization.

PUBLICATION

Tran, M., Ho, Q., & Ibn Rafiq, R. (2026). Efficient Layout-Aware Document Understanding for Educational Transcripts via Systematic Model Compression. Proceedings of the 2026 International Conference on Machine Learning and Computational Intelligence, pp. 79-84. doi.org/10.1145/3815970.3815979

EDUCATION

Bachelor of Science in Computer Science, Minor in Mathematics | December 2025

Grand Valley State University, Allendale, MI | GPA 3.72 | Dean's List

TECHNICAL SKILLS

Vision and Automation: Omron and Keyence vision controllers, inspection software, cameras, lighting, sensors, encoders, I/O boards, relays, servo drives

IT and Software: Linux, TCP/IP, DNS, hardware/software setup, system troubleshooting, Python, SQL, APIs, Git, Firebase, Microsoft Excel

Production Support: Machine operation, root-cause analysis, quality inspection, incident documentation, SOPs, 5S3R, safety and PPE
